

Perioperative Shared Health Record

Share Your Journey...

Booked for Surgery?

For many of us, that can be
a daunting prospect.

Share your perioperative journey
on our secure online platform:
the PSHR.

The Peri-operative Shared Health Record (PSHR) is a secure online digital health tool focused on patient-reported post-operative outcomes.

Why should you use the PSHR?

- Your surgeon and your anaesthetist can track your progress after your surgery and improve your care, using a secure platform.
- Your comments may help other patients going for similar procedures to know what to expect.
- If you wish to do so, you can contribute to ongoing research about the patient's perspective of their recovery after surgery.
- Learning about your journey can help health care professionals make surgery safer.

All personal patient information is stored securely and will only be visible to the patient and their selected health care providers.

To register as a patient on the PSHR, go to:
